

FIT2179 Data Visualisation Test 2 – Sample Questions

Instructions for Question **Q3** and **Q4**:

- For each visualisation, identify the name of the idiom(s). Note there can be more than one.
- Identify issues resulting in misleading or difficult-to-read data visualisations in no more than ten words. Ignore issues related to data collection, and pixelated or blurry appearance. If the visualisation has no issues, write “none” or NA. The listing of non-existing issues will result in mark penalties.
- For every issue that you identify, describe how to fix it in no more than ten words.
- For each visualised attribute, identify its type, the mark, and the channel used.

Q1

Imagine that you are tasked to select a projection for a map showing the area highlighted on the globe.

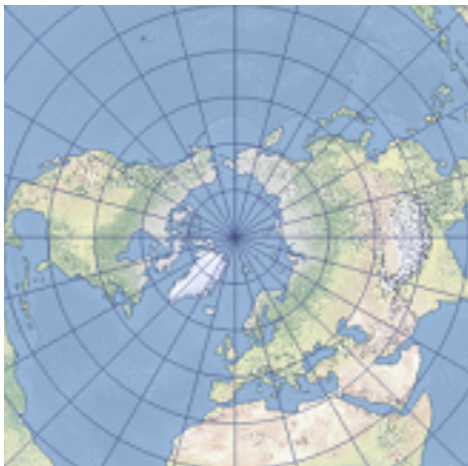

1. What is the developable surface of a projection resulting in small amounts of distortion for this area?

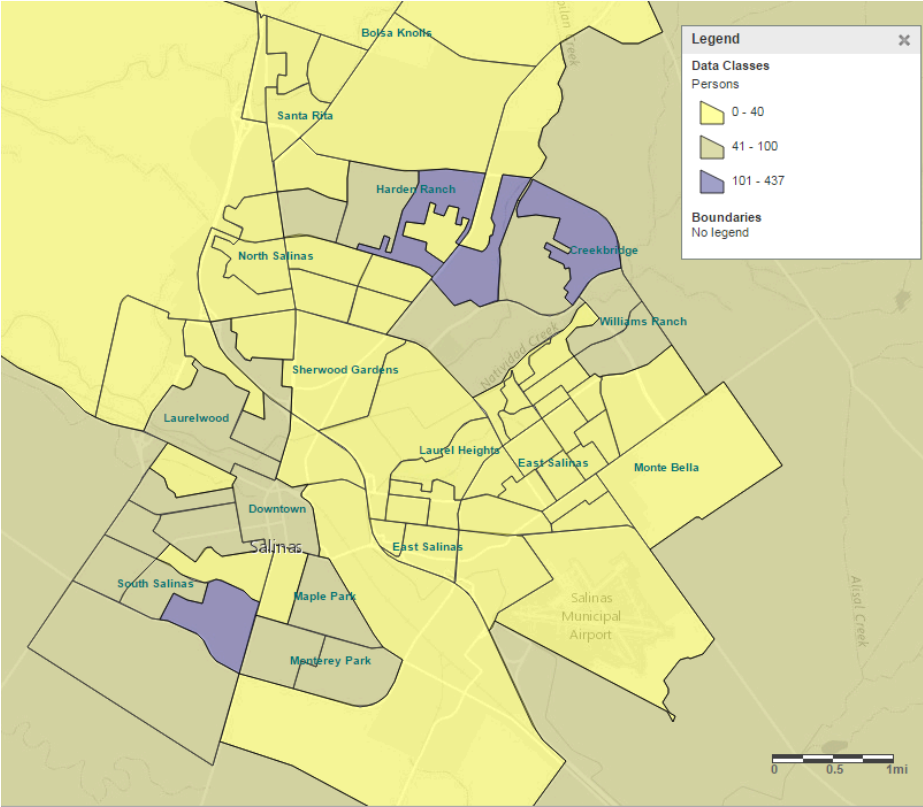

2. Create a sketch that shows the geometric configuration of (1) the globe, (2) the developable surface and (3) the mapped area. Do not draw on the provided image below.

Q2

What is the developable surface of the projection used for the map below?

Q3

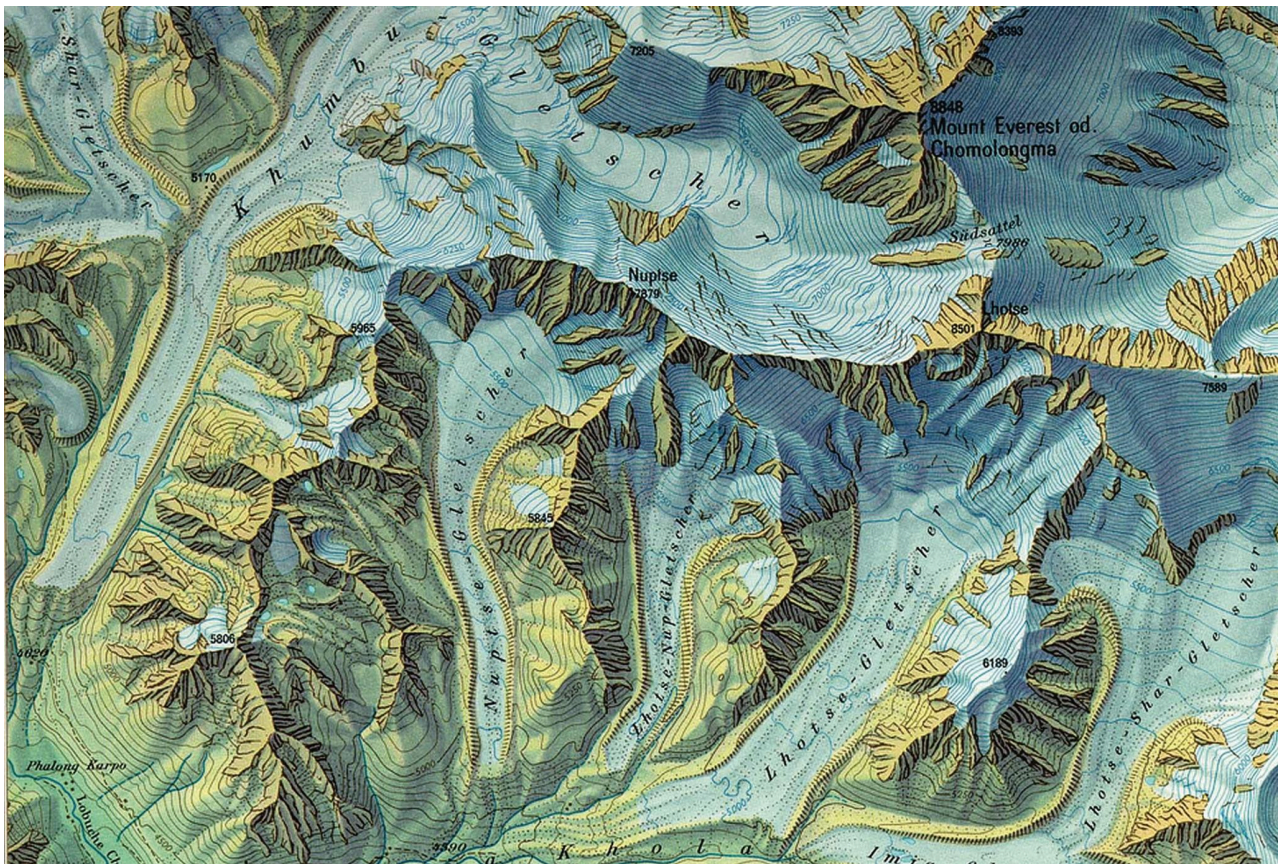

Idioms:

Major issue(s) if any:

How to fix the issue(s):

Attribute description	Attribute type	Mark	Channel

Q4

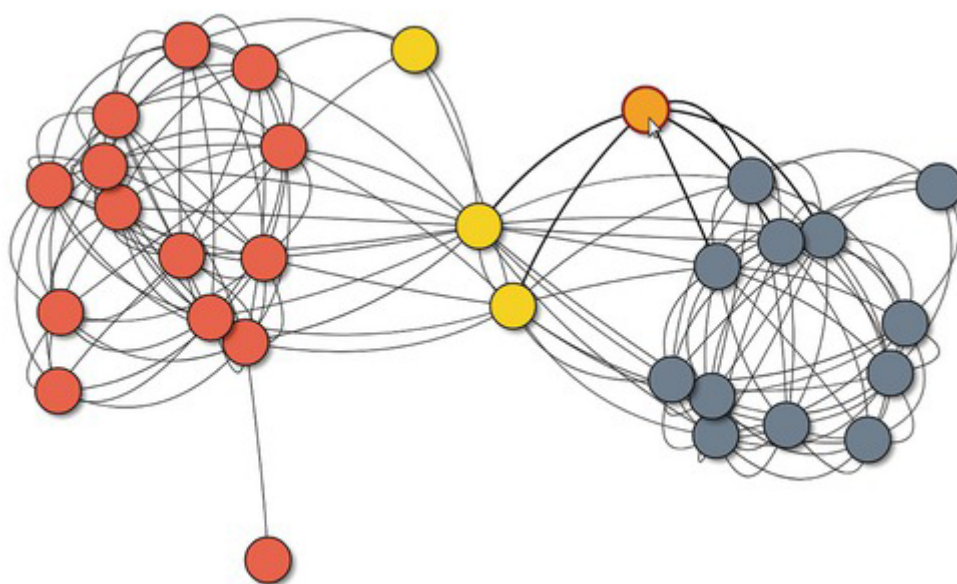

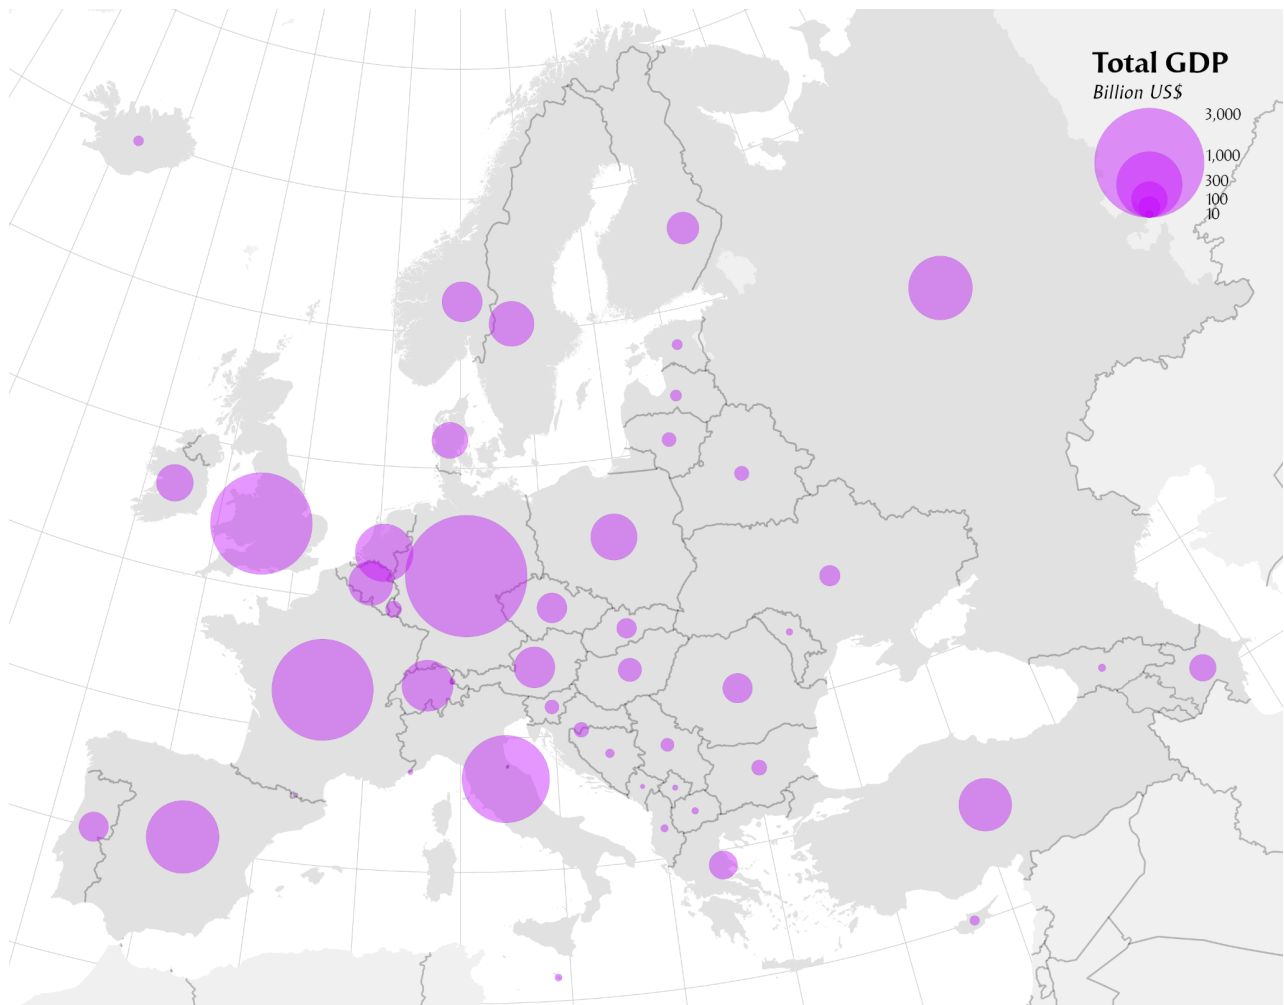

Idioms:

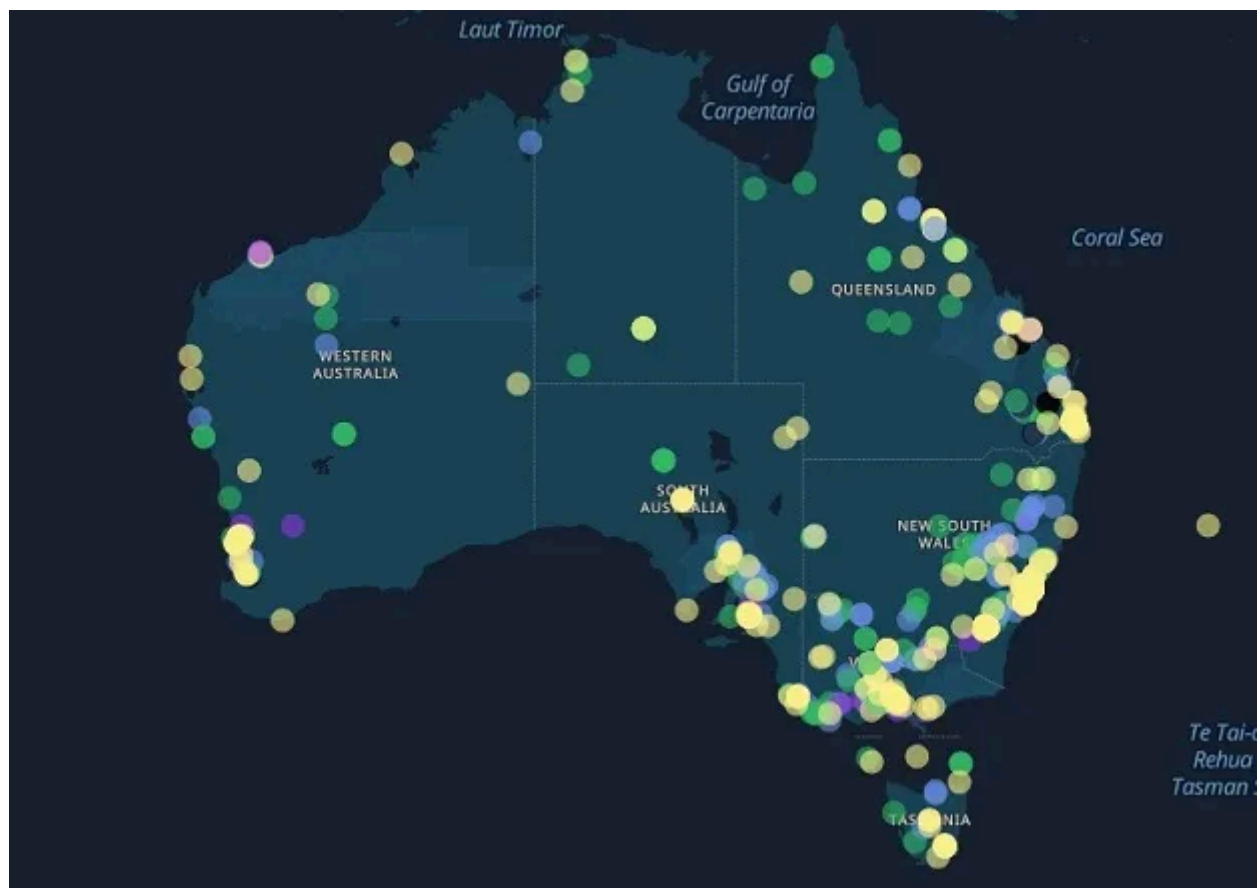

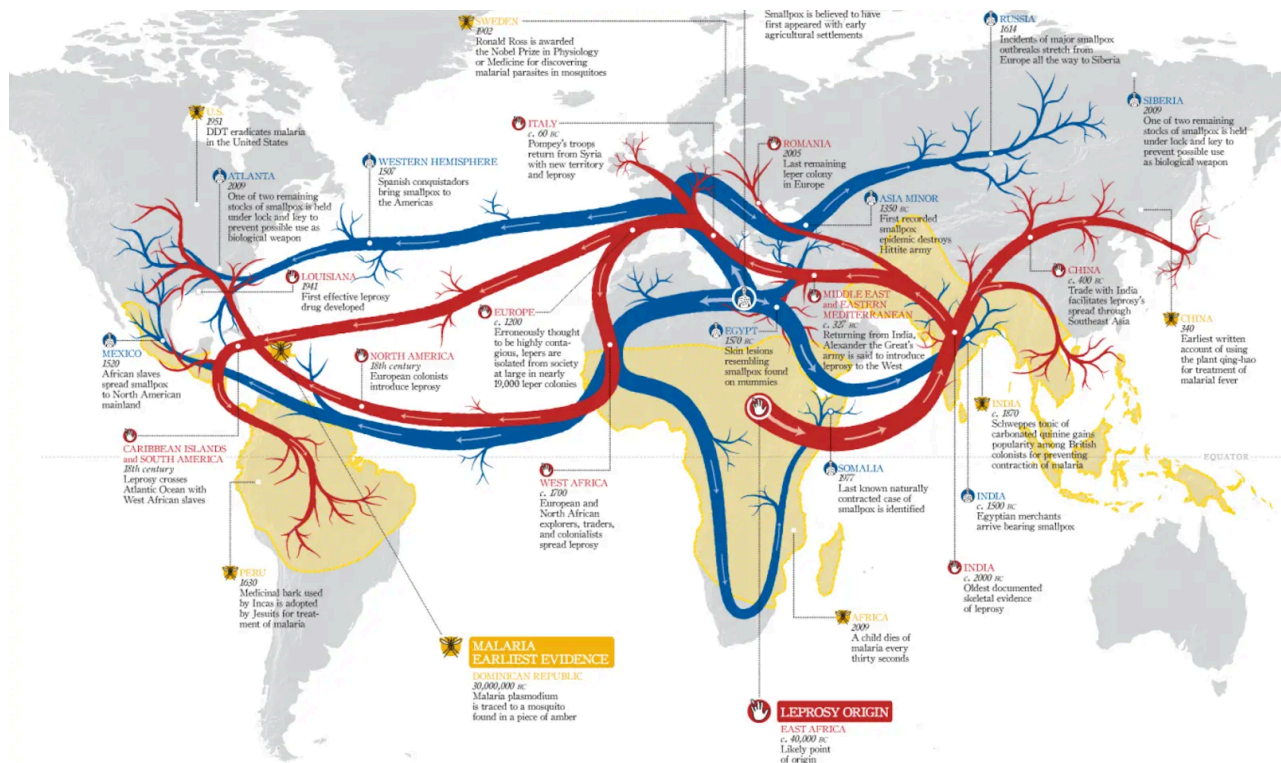

Major issue(s) if any:

How to fix the issue(s):

Attribute description	Attribute type	Mark	Channel

Questions 3 and 4 may cover a variety of visualisation idioms. Below are a few example visualisations.
